

Multi-Sport Play & Sporting Surfaces

Colourful designs and lines can be incorporated to create versatile sport and recreation facilities for all ages.

Enduroturf sporting and play fields are always ready for play. They have excellent drainage capabilities, even after heavy rain. Gone are the days of muddy patches, and they will never crack during extended periods of dry weather.

Enduroturf offers tailor made solutions, ongoing service and support, professional installations with products that are backed by a lengthy manufacturer's warranty - up to 10 years.

Provoke imagination and play

Children love colour. Enduroturf's design team are experts at creating interesting features that stimulate imagination and play.

Low-maintenance

Enduroturf products require minimal maintenance. You can easily remove debris from the surface by light brushing or by using a blower. Unlike bark chip or sand, Enduroturf synthetic grass does not conceal dangerous debris.

Playground Safety - AS 4422

Enduroturf long pile synthetic lawns are soft to touch and gentle on young hands, knees and joints. The addition of rubber granule infill provides excellent absorption for minor impacts providing a uniquely safe play environment. Rubber infill reduces firmness and coarseness that traditional sand in-filled grasses are known for.

For areas where a greater level of protection is required such as playgrounds with climbing equipment or swings, Enduroturf synthetic grasses can be installed to meet AS4422 - satisfying critical fall height regulations.

Designed for Endurance

Rubber and/or sand infill is brushed into the synthetic grass and is held firmly in place by the interlocking fibres, resisting vandalism, wear and tear. All Enduroturf products are made in Australia with long manufacturer's warranties - up to 10 years.

Fire Resistance

Enduroturf synthetic grasses will not ignite. Small localised burns can be easily concealed by brushing up new fibres from below the infill.

Climate Extremes and UV protection

Enduroturf synthetic surfaces are designed and made in Australia to withstand harsh Australian conditions. They are UV protected and are guaranteed against fading and degradation from sunlight.

Environmentally Friendly

Enduroturf uses clean recycled infill products. Enduroturf synthetic grasses are 100% lead free.

*Ready for play
when you are...*

Enduroturf synthetic lawn looks and feels real, just like a lush well maintained lawn should. It introduces rich organic colour and texture, designed and made here in Australia to blend in and endure our sometimes harsh local landscape.

Enduroturf synthetic lawn is so soft you would be forgiven for thinking it's delicate, yet it stands up to the toughest of environments.
